

Kimih Saloon & Beauty Platform

Comprehensive System Architecture & Technical Documentation

Version 2.0 • Production Ready

1. Executive Summary

Kimih is a modern, high-performance beauty, wellness, and salon booking marketplace platform. It connects customers seeking premium beauty services with top-rated salons, spas, and independent beauty professionals. The system provides a seamless experience for end-users to discover, compare, and book appointments online while empowering salon partners with management software for staff, schedules, bookings, and inventory.

2. Technology Stack & Frameworks

Layer	Technology Used	Purpose / Details
Backend Framework	Laravel 10.x (PHP 8.2+)	Core MVC architecture, authentication, routing, Eloquent ORM.
Database	MySQL / MariaDB	Relational database with optimized indexing for fast search and booking queries.
Frontend Templating	Blade & Bootstrap 5	Server-side rendering with reactive UI components.
Custom Design System	Kimih CSS & Vanilla JS	Custom responsive layouts, dark/light aesthetics, mobile PWA optimization.
Authentication & Roles	Spatie Laravel Permission	Role-Based Access Control (Admin, Business User, Customer).
Hosting & Deployment	Hostinger Cloud / Nginx / SSH	Automated SSH deployments with asset caching & migration triggers.

3. Core System Modules

1. Customer Marketplace

- Dynamic Salon & Service Search
- Interactive Location & Map Filters
- Real-Time Service Cart & Booking
- Customer Dashboard & History
- PWA Mobile-optimized UI

2. Salon Partner Dashboard

- Service & Pricing Management
- Interactive Appointment Calendar
- Staff / Stylist Schedule Allocation
- Client Database & Booking History
- Business Profile Customization

3. Super Admin Panel

- Partner Business Verification
- Category & Brand Controls
- System Performance Monitoring
- Global Booking & Transaction Logs
- Role & Access Configuration

4. Core Database Architecture

- Optimized Composite Indexes
- Normalized Relational Models
- Performance-tuned Search Queries
- Automated Seeder & Migration Pipeline
- Secure Password & Data Encryption

4. Live Production Environment

```

5. Recent Enhancements & Optimization

- **Database Performance Indexing:** Added specialized indexes on core database tables (bookings, services, businesses, users) for sub-10ms response times.
- **Redesigned UI/UX:** Enhanced landing page, shop details, search interface, and responsive footer for mobile users.
- **PWA Integration:** Added Manifest.json and Service Worker support for app-like mobile experience.
- **Automated Deployment Pipeline:** Configured SSH automated sync for code, public assets, and database migrations.
